

Firefly™

FIRE HOODS & DOWNLIGHT COVERS

FIREFLY™ Fire Hoods and Downlight Covers are designed to provide fire protection over the recessed luminaire or downlight in a fire rated ceiling.

In the event of a fire the Fire Hood or Downlight Covers will delay the progress of fire and smoke travelling through a ceiling, thereby providing precious time for occupants to safely exit the building and emergency services to minimise fire damage.

FIREFLY™ fire barriers are made by TBA Protective Technologies Ltd: protecting people and property around the world.

DESCRIPTION	Lightweight fire protective cover suitable for recessed luminaires or downlights of various sizes
CERTIFICATION	Third Party Certified by IFCC. Certificate number: IFCC 1564
APPLICATION	Can be installed from above or below
